50
YEARS

MADE TO SHAPE THE FUTURE

50 YEARS SETTING HIGHER STANDARDS

We've been defining new routes in filtration technology and thermal management since 1971.

Meeting new needs, facing higher standards.

That's how we've become one of the most respected Italian companies in filtration technology: **fifty years of research, passion and innovation.**

A WINNING COMPANY

A SUCCESS STORY SINCE 1971

Universal Filter Italiana, now UFI Filters, was founded in Nogarole Rocca, in Italy, in 1971 as a supplier of filtration systems for the automotive market.

Some 10 years later, the company began working with the most important Formula 1 teams, becoming suppliers of specific, tailor-made solutions guaranteeing top performance and taking the teams to the top of the championships.

In the 1990s, thanks to the vision and growth goals of its owners, UFI Filters began to expand its boundaries into new product development and new world markets. In 1992, UFI Hydraulic Division was established, starting production of filtration solutions for the hydraulic sector. In 1996, being the first European filtration company to enter the Chinese market, UFI opened the first of its now six plants in China.

At the start of the new millennium, UFI Filters became a supplier to the demanding German car manufacturers, providing not only fuel but also oil and air modules, and thus reinforcing its reputation as a global Original Equipment supplier to the world's leading car manufacturers. In 2010, UFI entered the world of heat exchangers, specialising in the design, development and production of vacuum-brazed aluminium water-cooled heat exchangers. Today, 6 of the 7 biggest automotive groups in the world work with UFI to develop complete filtration and lubrication systems.

The results obtained by the company can be attributed to the constant investment in research and development (over 5% of turnover), allowing UFI to come up with innovative, exclusive solutions for its customers. Over the years, UFI has registered more than 280 patents.

The UFI Innovation Centres in Italy, India and China are equipped with sophisticated, advanced research and analysis tools for developing new products and filtration materials, both for automotive and hydraulic sectors.

UFI Filters now has over 4000 employees at 19 production sites, 3 innovation centres and 57 commercial offices. Thanks to its Innovation Centres and its wide experience, UFI Filters has developed different types of high performing media with specific Formulas, being the first in the market to introduce the synthetic fibres in fuel filters.

The company counts now six types of FormulaUFI filtration media:

FormulaUFI.Extreme
FormulaUFI.Stratiflex
FormulaUFI.Micron
FormulaUFI.Web
FormulaUFI.H2O
FormulaUFI.Cell

UFI filters also meets the requirements of maximum protection for hydraulic systems, with high efficiency and constant stability, thanks to high performance materials and filtration media, according to the market and technology demand.

UFI Filters knows the basis of filtration and masters the best filtering materials to make it work at best.

THE GROUP BY NUMBERS

1971

Founded in 1971, it's now a world leader in filtration technology and thermal management.

10

10 application sectors: from automotive (LV/HD), industry and hydraulics to special applications.

4.000

19 production plants and over 4,000 employees in 21 countries worldwide.

F1

Present everywhere, from F1 cars to the ExoMars spacecraft.

95%

95% of vehicles manufacturers worldwide choose UFI Filters.

>250

>250 specialised technicians in the innovation and development centers in Italy, China and India.

>280

Over 280 patents at international level.

5%

5% of turnover reinvested in R&D.

6

6 lines of filters supplied: air, oil, fuel, cabin air, hydraulics and transmission.

>250

More than 250 co-branded products with the biggest OEM's.

UFI FOR AGRICULTURE

THE BEST PROTECTION FOR FARMING EQUIPMENT

In the agriculture sector, cleaning processes play an increasingly crucial role. Adequate cleanliness of the engine protects agricultural machinery against wear, thus contributing the proper functioning of the system. In addition, filters for agricultural machines operate

under the harshest conditions. This is why the use of high-quality products is essential.

Furthermore, an efficient filtration of the cabin air ensures the health and general well-being of the driver, protecting him from the dust and chemical gases.

All above considered, it is important to implement an effective filtration program, so as to reach the following goals:

- + Prevent the damage of sensitive components
- + Extend maintenance intervals and reduce engine components wear and costs
- + Improve the performance and the reliability of the machinery
- + Reduce environment pollution.
- + Guarantee good air quality inside the vehicle

For this reason, selecting the best supplier for your agriculture equipment is a matter of paramount importance. **UFI Filters has the necessary filtration technology and quality to manufacture every type of filter** to meet OE and independent aftermarket requirements for agriculture applications.

“FormulaUFI” is the media brand that contains all the know-how on filtration, the nominal root from which the names of the specific filter media developed

in the UFI Innovation Centres around the world derive. Different formulations produced internally by UFI Filters, which meet the most stringent regulations and the needs of the most important manufacturers.

All customisable according to the specific requests of the individual application whether it is agricultural, automotive or industrial, covering the entire spectrum of filtration.

THE RANGE

A RELIABLE RANGE FOR AGRICULTURAL APPLICATIONS

The **ever-expanding** range of UFI Filters counts **more than 1,000 codes**, including air and cabin, oil, fuel and hydraulics filters. Many of them have specific agricultural applications.

CABIN AIR FILTER

FUEL FILTER

BLOW-BY FILTER

AIR FILTER

HYDRAULICS
FILTER

OIL FILTER

FUEL FILTRATION

MAXIMUM ENGINE PERFORMANCE

Fuel filters and pre-filters have the function of retaining contaminants that can compromise the performance of the engine or cause damage to components.

Diesel filtration in agricultural vehicles is ensured by a **double filtration system**, which includes the **pre-filter** with water separation function and the **filter**, which has a fine filtration task.

FormulaUFI.H2O filter media fully satisfies the needs of diesel filtration typical of agricultural vehicles, as it is possible to choose filter media that guarantees a high level of water separation on prefilter, or to block up to 99.5% for a particle size of 4 microns on main filters, thanks to the base in cellulose fibres combined with synthetic ones, or in glass.

UFI Fuel filters range ensures:

- + Engine components protection from rust and corrosion
- + Long service intervals
- + High water separation efficiency (>95%)
- + Several layout options (fuel heater, WIF, temperature sensor, etc.)
- + Bio-diesel compliance

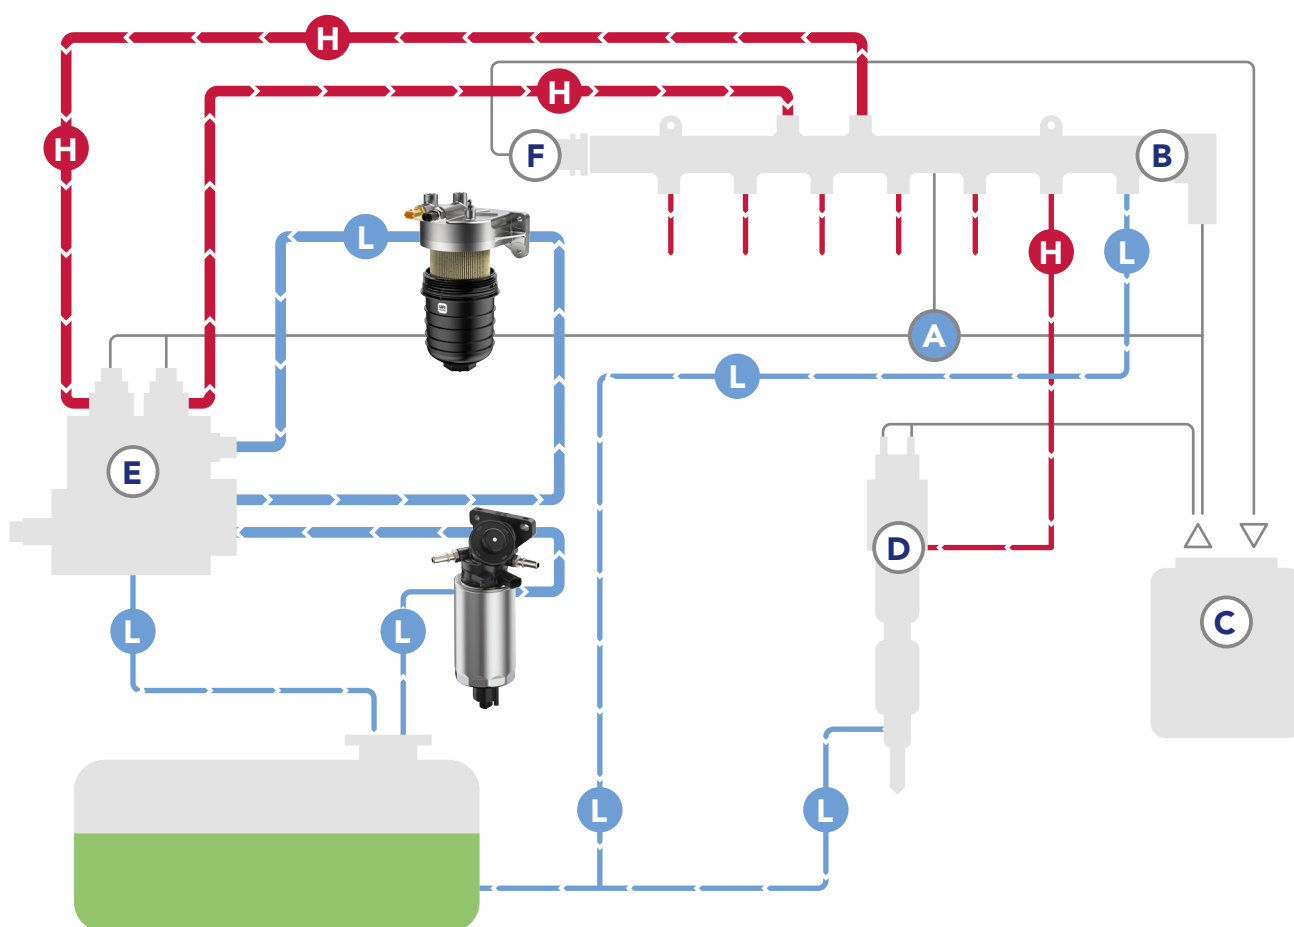

PRE-FUEL FILTER

FUEL FILTER

FUEL CIRCUIT

KEY

- A** High pressure rail
- B** Pressure control valve
- C** Electronic engine control unit
- D** Solenoid-valve injector
- E** High-pressure pump
- F** Rail pressure sensor

- H** High pressure
- L** Low pressure rail
- Electrical connection
- Fuel

AIR FILTRATION

HIGH EFFICIENCY FILTRATION

UFI Filters develops advanced air filtration systems. Air filters are designed to retain dirt, dust and soot before it enters the engine, thus avoiding water contamination and other particles potentially harmful to the machine and ensuring the proper air intake to the engine.

The objective is the optimisation of size and reduction of noise, goals that can be achieved thanks to fluid dynamic studies, tests carried out in our research

laboratories that recreate the real conditions of use of the filter itself and the engineering collaboration with our customers.

FormulaUFI.Stratiflex is the multilayer filtration media used for UFI air filters. The combination of different materials guarantees the achievement of unique filtration efficiency together with a long filter life

Constant maintenance and cleaning are necessary to ensure the proper air intake to the engine. UFI Air filters and spare parts help the combustion process to be carried out efficiently, as they feature:

- + High-efficiency media
- + Vibration-resistant layout
- + Superior performance and proven protection

**CUSTOMISED
AIR FILTER ELEMENT**

AIR FILTER ELEMENT

CABIN AIR FILTRATION

MAXIMUM PROTECTION FROM IMPURITIES

The main purpose of the cabin air filter is to protect against pollution (dust, soot, combustion gases, bacteria and pollen) that farmers unconsciously inhale daily inside the vehicle interiors. The cabin air filter range of UFI Filters ensure high efficiency and high humidity

resistance for the welfare, health and safety of the driver. UFI cabin air filters are made with **FormulaUFI. Stratiflex**, a combination of different material layers that guarantees the achievement of unique filtration efficiency together with a long filter life.

UFI range counts two types of cabin filters:

- 1 Pollen filters:** made from synthetic non-woven fabric, which can capture more than 90% of particles greater than 2.5 microns in diameter, such as dirt and pollens.
- 2 Carbon filters:** with non-woven filter media combined with activated carbon, which also prevents particles ranging from 0.01 to 5 microns in diameter with (gases, bacteria, fungus, odours) from getting into the vehicle's cabin.

UFI Cabin Air filters range ensures:

- + High performance
- + High filtration efficiency
- + High customisation capacity

CABIN AIR FILTERS

CABIN AIR FILTERS

HYDRAULICS FILTRATION

RELIABLE PRODUCTS TO ENDURE EXTREME CONDITIONS

The hydraulic filtration's primary function is to ensure the proper working of the pumping system, thus protecting its expensive components. Hydraulic filters trap all particles, generated by the equipment wear or coming from the environment, that have an abrasive effect on the components of the hydraulic system such as the pump, control valves, cylinders and hydraulic motor.

Ever higher pressures and shorter cycles increase components wear, thereby increasing the level

of harmful contaminants in the oil that can cause malfunctions of the system and machine downtime.

UFI Hydraulics complete filters and spare parts, thanks to its wide range of FormulaUFI filtration media, **ensure that the oil preserves its qualities over time**, thereby guaranteeing the long life and performance of the hydraulic system, whilst maintaining the filtration system efficiently and reliably.

- + High efficiency of filtration
- + Extended filter life
- + Longer service interval
- + Light design & heavy performance
- + High reliability
- + Wide range of flexible and tailor-made solutions

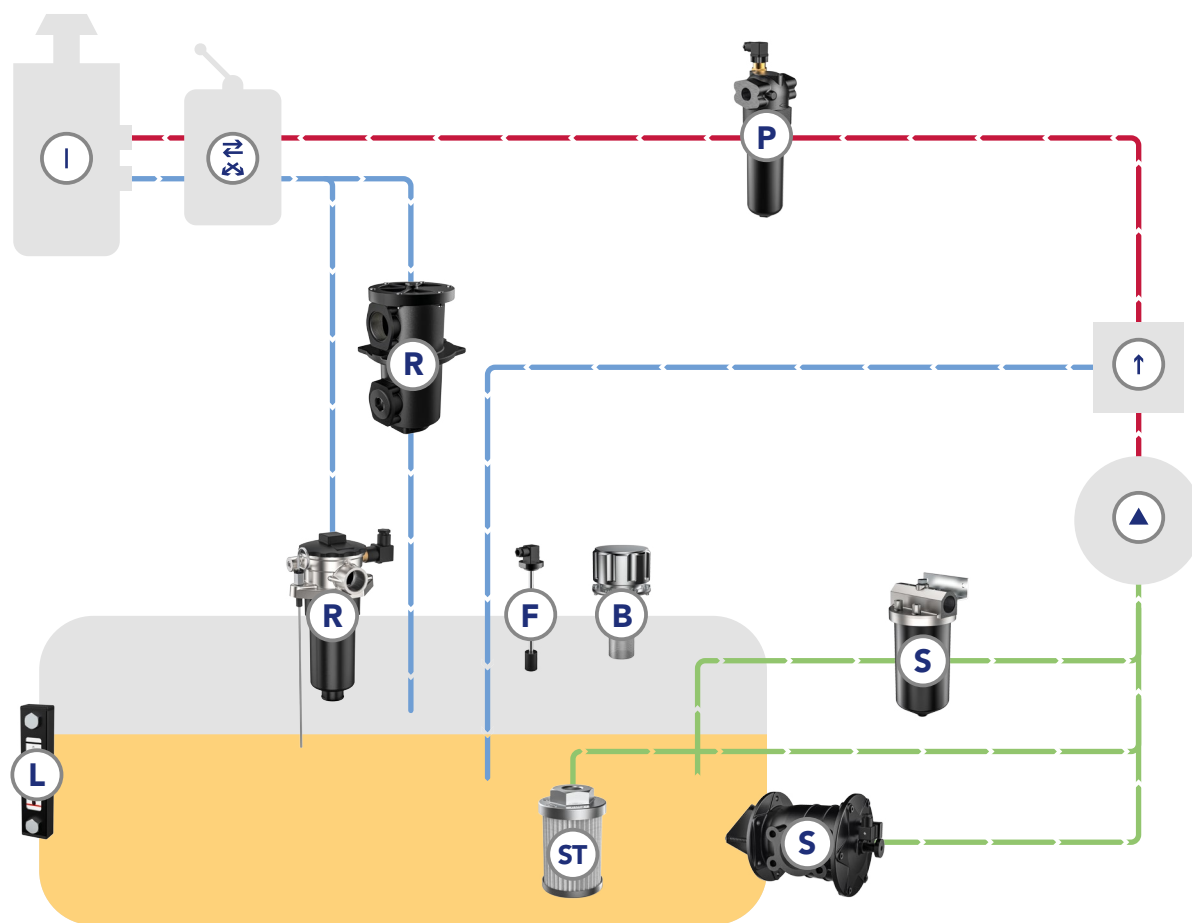

**FSC
SUCTION FILTER**

**FORTIMAX
PRESSURE FILTER**

HYDRAULIC CIRCUIT

| R | Return filter |  | Pressure regulator |
| F | Float switch |  | Directional control valve |
| B | Breather |  | Double acting cylinder |
| ST | Suction strainer |  | Suction |
| P | Pressure filter |  | Return |
| S | Suction filter |  | Pressure |

BLOW-BY FILTRATION

SMART FILTRATION SOLUTIONS

For **blow-by filters**, which are also used on agricultural vehicles and have the function of filtering and recovering the oil vapours generated by the engine in the combustion chamber, UFI Filters uses **FormulaUFI.Micron**.

This is a filter media composed of glass fibres combined with other synthetic fibres, which offers filtration capacity for the smallest particles. Thanks to the oleophobic material of **FormulaUFI.Micron**, the filter is resistant to the acid environments typical of blow-by gases.

UFI Filters blow-by filters are of two types:

- 1 Static panel:** filters the gases according to a coalescence principle,
- 2 Rotating and self-cleaning:** oil separation occurs thanks to the combination of centrifugal forces and coalescence phenomena. They have very compact dimensions, have low pressure drop and high filtration efficiency.

The UFI Filters blow-by filter plays a fundamental role in reducing polluting emissions, due to the combustion of oil droplets recirculated in the combustion chamber. The gases are recovered and then highly filtered

avoiding the emission of contaminants into the atmosphere and the formation of nucleation centres from ash and PM (fine dust) caused by the burnt oil detectable in the exhaust pipe.

STATIC PANEL

ROTATING BLOW-BY

OIL FILTRATION

EXTREME PERFORMANCE TECHNOLOGY

For the **oil filtration** of agricultural machinery, UFI Filters uses **FormulaUFI.Stratiflex** the most revolutionary formula developed by the company where the stratified combination of different materials such as cellulose, glass fibres and hydrophobic barrier ensures an exclusive efficiency of filtration, combined with a longer service life of the filter.

The lubricating fluid has the functions of keeping the engine parts clean, reducing the solid friction

between the components, sealing, protecting against corrosion, cooling the system and transmitting the engine's power to the other elements of the vehicle.

For this reason, an efficient lubricating filter for agricultural machines is essential to ensure the longevity and reliability of the equipment, since the filtration system will retain metallic particles from wear between the engine parts and other contaminants potentially harmful to the engine.

UFI Filters lube filters, using advanced technology and quality media, ensure long lasting and optimum engine protection to keep agriculture equipment moving smoothly, thanks to:

- + **High-filtration efficiency**, cellulose-synthetic combined media
- + **Solid housing with lightweight layout**
- + **Easy replacement of the filter element**
- + **High performance**
