50 YEARS SETTING HIGHER STANDARDS

We've been defining new routes in filtration technology and thermal management since 1971.

Meeting new needs, facing higher standards.

That's how we've become one of the most respected Italian companies in filtration technology: fifty years of research, passion and innovation.

SUMMARY

THE GROUP **BY NUMBERS**

1971

Founded in 1971, it's now a world leader in filtration technology and thermal management.

19 production plants and over 4,000 employees in 21 countries worldwide.

4.000

96%

96% of vehicles manufacturers worldwide choose UFI Filters.

Over 250 specialised technicians in the innovation and development centres in Italy and China.

5% of turnover reinvested in R&D.

10 application sectors: from

automotive (LV/HD), industry and

hydraulics to special applications.

Present everywhere, from F1 cars to

the ExoMars spacecraft.

Over 280 patents at international level.

6 lines of filters supplied: air, oil, fuel, cabin air, hydraulics and transmission.

5%

Over 250 co-branded products with the biggest OEM's.

HEAVY DUTY ON ROAD FILTRATION

UFI IN THE OE MARKET

Vehicle manufacturers must guarantee the **highest levels of efficiency and safety,** especially when it comes to heavy duty vehicles which cover long distances every day. That is why it is important to be able to rely on top level suppliers like UFI, with its extensive range of products.

UFI supplies its OE products to manufacturers who account for 50% of the global production of heavy duty vehicles including:

DAIMLER FAW FORD IVECO / CNH INDUSTRIAL ISUZU MAN MITSUBISHI SCANIA WEICHAI AND OTHERS...

UFI FILTERS CAN OFFER YOU:

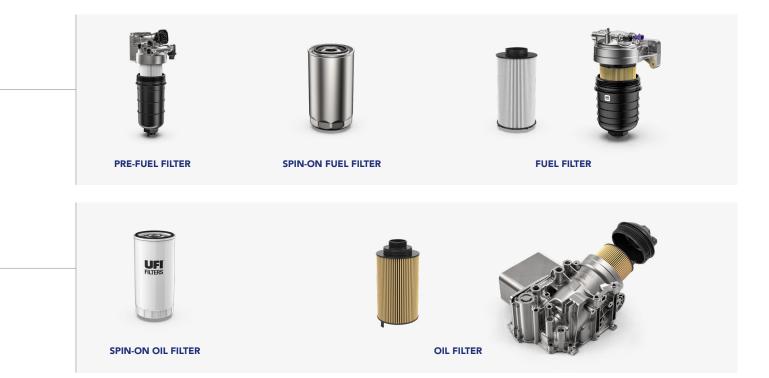

- + Advanced filtration technology in accordance to OEMs standards
- + Same quality of the OE in the AM products
- + High-quality products that **improve the performance of the engine**
- + 12 Formula.UFI media receipts for HD products developed and produced in-house
- + A close and direct relationship with **Customer Service**

ON-ROAD ENGINE FILTRATION

UFI PRODUCT RANGE

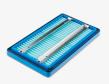

UREA FILTER

ROTATING BLOW-BY

STATIC BLOW-BY

FUEL FILTRATION

FUEL FILTERS FOR MAXIMUM ENGINE PERFORMANCE

UFI Filters fuel filtration products **protect the engine from dirty.** The fuel filters also protect the engine components from rust and corrosion by separating the water present in the fuel.

Our range covers both filtration stages:

- **1 Primary filtration,** to guarantee separation of the water from the fuel and to block big particles.
- **2** Secondary filtration, to guarantee high filtration efficiency and lifespan of the engine.

To enable the best performance, the right pre-filter needs to be installed together with the right filter (right filtration performance balancing and optimisation): with UFI you can.

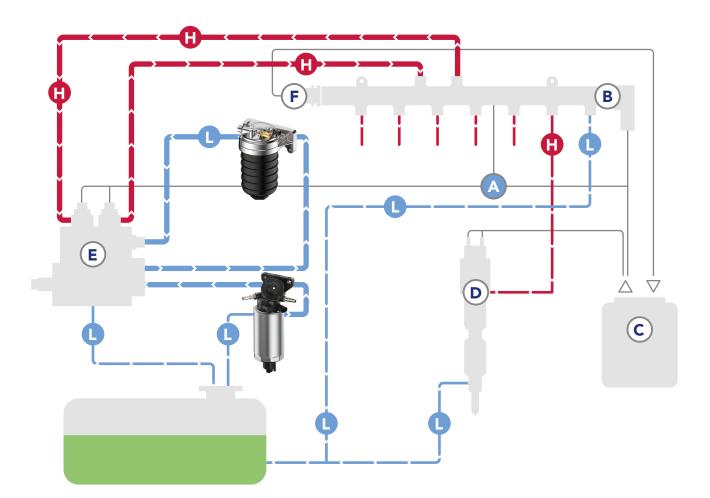

PRE-FILTER

FILTER

FUEL CIRCUIT

KEY

- A High pressure rail
- **B** Pressure control valve
- **C** Electronic engine control unit
- D Solenoid-valve injector
- E High-pressure pump
- F Rail pressure sensor

- High pressure Low pressure rail
 - Electrical connection
- Fuel

FUEL FILTRATION STANDARDS

FUEL FILTRATION KPI

FORMULAUFI FOR FUEL FILTRATION

FormulaUFI.H2O, that is used for example in the Ford F-Max Euro 6 pre-filter and fuel filter and in the FPT Iveco Stralis Euro 6 fuel filter, is made of cellulose fibres with synthetic or glass fibres inside to maximise the filter efficiency up to 99,5% at 4 micron(c), to improve dirt holding capacity and water separation.

PLUS

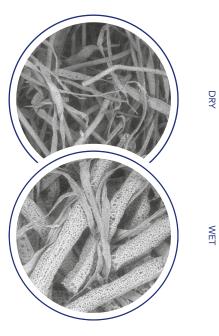

- + Always coupled with high quality meltblown to increase filter life.
- + Very high filtration efficiency.

+ High water separation performances, in particular when used in combination with other layers (Stratiflex Fuel).

FUEL FILTER

OIL FILTRATION

OIL FILTERS FOR ENGINE DEFENCE

UFI Filters oil products stop contaminants created inside the engine oil, preventing engine components wear and avoiding damages.

They can also extend the engine components life thanks to the FormulaUFI.Stratiflex media, developed by UFI, which cleans the engine oil quicker compared to the traditional filtration media types.

TRADITIONAL DESIGN

COMPLEX MODULES

FUNCTION

- + Stop all particles inside the engine oil circuit.
- + **Prevent wearing** of the mechanical parts.
- + Particles **must** be stored by the filter for the complete **service interval.**

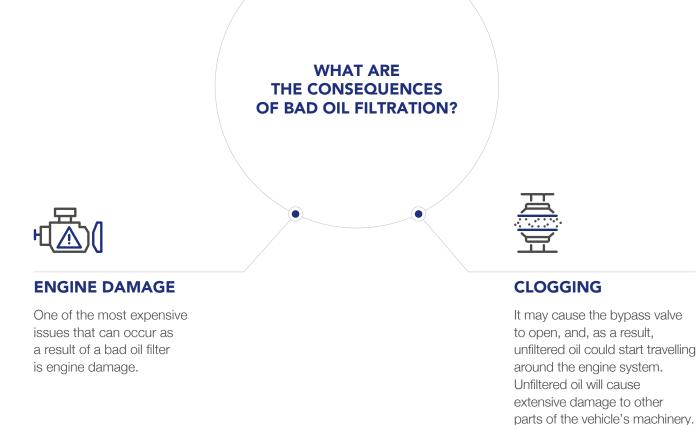

OIL FILTRATION STANDARDS

OIL FILTRATION KPI

To ensure the correct engines' working conditions, **UFI Filters Group** has developed **new filtering solutions**, with FormulaUFI composed of glass fibres and synthetic materials, which interact with all engine fluids and their contaminants.

The correct cartridges dimensioning allows reaching the **maximum level of filtering efficiency** and **prevents** the **premature clogging of the filter.**

Imposed targets are achieved with the development of "green" oil modules that limit the environmental impact and allow the integration of several functions, with the aim of reducing engine size and weight.

FORMULAUFI FOR OIL FILTRATION

FormulaUFI.Cell, that is used for example in the oil module for MAN D15, MAN TGX and in the oil module for Shannxi Trucks (powered by Weichai engines), is based on cellulose fibres mixed with synthetic fibres

or glass fibres to maximise the filter life and reduce pressure drop. The filter efficiency is determined by the mix grade of cellulose and other fibres.

PLUS

- + High stiffness to retain stability, especially during low temperature conditions (Cellulose Engine Oil Media).
- + Treatments for water resistance.

- + Improved performances in mechanical stability and filter life.
- + Flame retardant at F1-class and also for the aftermarket.

Microscope magnification

FORMULAUFI FOR OIL FILTRATION

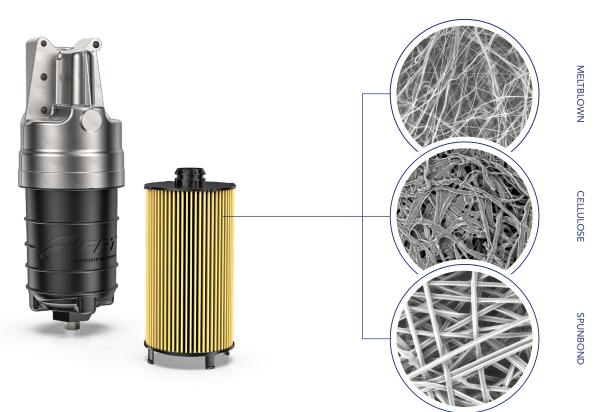

FormulaUFI.StratiFlex, that is used for example in the FPT Iveco Trakker Euro 6 oil filter and the Ford F Max Euro 6 oil filter, is a combination of different layers (i.e. cellulose, glass fibres and hydrophobic barrier) and it's one of the most revolutionary Formulas that the UFI Group has developed over years.

The combination of different materials guarantees the success of unique filtration efficiency together with a longer filter life.

PLUS

- + UFI has been a pioneer in the development of StratiFlex.
- + FormulaUFI.StratiFlex represents the most efficient oil filter on the market with a impressive long life.
- + High customisation capacity.
- + High performance.
- + High filtration efficiency.

Microscope magnification

AIR FILTRATION

AIR FILTERS FOR EFFICIENT COMBUSTION

UFI Filters develops advanced air filtration systems. The objective is the **optimisation of size and reduction of noise** - goals that we can achieve thanks to fluid dynamic studies - tests carried out in our research laboratories that recreate the real conditions of use of the filter itself and the engineering collaboration with our customers.

The UFI Filters filtering systems guarantee:

- + Constant distribution of air flow in the module.
- + Elimination of water molecules thanks to the centrifugal force produced inside the module.
- + Filtration of the smallest particles which remain trapped in the pre-filter and in the filtration media.
- + Complete, integrated filtration systems with built-in soundproofing systems.
- + The FormulaUFI.Extreme, a 100% synthetic media developed in-house by UFI Filters, enriched with additives that guarantee filter impermeability and increase the life of the filtering element.
- + Minimum risk of flammability flame retardant to ensure greater safety.

FORMULAUFI FOR AIR FILTRATION

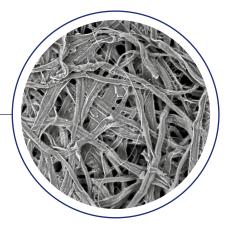

FormulaUFI.Cell, that is used for example in the oil module for MAN Lyon's 4 Bus, is composed of cellulose fibres mixed with synthetic fibres or glass fibres to

maximise the filter life and reduce pressure drop. The filter efficiency is determined by the mix grade of cellulose and other fibres.

PLUS

- + High stiffness to retain stability, especially during low temperature conditions (Cellulose Engine Oil Media).
- + Treatments for water resistance.
- + Improved performances in mechanical stability and filter life.
- + Flame retardant at F1-class and also for the aftermarket.

Microscope magnification

BLOW-BY FILTRATION

HIGHEST BLOW-BY OIL MIST SEPARATION EFFICIENCY

The Blow-By-Filters have the function of **filtering and recovering the vapours** from the oil generated by the engine in the combustion chamber. They play a fundamental role as the gases are recovered rather than dischared into the atmosphere releasing contaminants such as CO, NOx and PM into the atmosphere.

There are two types of UFI Blow-By Filters:

- **1** Static panel: these filter gases according to a coalescence principle.
- **2** Rotating and self-cleaning: these have very compact dimensions, low pressure drop and high filtration efficiency. They are mounted directly on the hollow camshaft or on a high pressure pump shaft.

UFI Filters uses FormulaUFI.Micron, the filter media made of synthetic material coupled with glass fibre in order to be able to withstand the high levels of saturated acidity of the oil vapours.

ROTATING BLOW-BY

STATIC BLOW-BY

FORMULAUFI FOR BLOW-BY FILTRATION

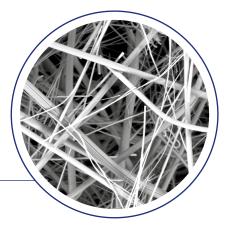

FormulaUFI.Micron, that is used for example in the lveco Stralis and lveco Trakker blow-by filters, is composed of glass fibres (sometimes mixed with synthetic fibres) to maximise the filter life, efficiency and reduce pressure drop.

Filter efficiency is related to fibre sizes and distribution: very small fibres increase the filtration efficiency, while size gradient increases the life of the filter element.

PLUS

- + High chemical stability even in harsh conditions.
- + Very stable also in contact with water or fuels.
- + Oleophobic treatments are also present for air/ oil separation when requested.
- + Tailor made media if required.

Microscope magnification

AIR DRYER AND AIR BREATHER

AIR DRYER

Air dryer filters absorb air from the atmosphere via a compressor to supply air to the brake system.

The aim is to prevent the brake system contamination from the moist, aerosols (dirt in micron size) and oil through the chemical desiccant and separator media.

Through this, the brake system can be protected and can be ran with maximum efficiency and longer life span.

AIR BREATHER

Air breathers represent one of the most important anticontamination methods because they **protect the tank-reservoir against the ingress of contamination from the atmosphere.**

The "breather" (with or without filler-cap) forms a barrier between the exiting air and entering the free-air space above the level of hydraulic oil in the tank-reservoir.

This function is very important because contaminated fluids can cause serious leakage, low fluid levels and premature component failure.

During its service life, a breather filter becomes contaminated with particles, oil mist and moisture, so it must be changed periodically. If not, it becomes clogged and stops "breathing" with the system.

This, consecutively, can create partial vacuums and pump cavitation within the system. Regular replacement and inspection of breather filters are important to the long-term performance of hydraulic systems.

UREA FILTER

UREA FILTER

The urea-water solution is added to the SCR (selective catalytic reduction) systems to **limit the exhaust emissions.**

In fact, urea-water solution, which converts harmful gases into harmless nitrogen and water, **reduces** such emissions by up to 80%.

The urea filter protects the injection nozzles and other parts of the system against wear and extend the service life of the entire dosing unit.
